Professional Kitchenware

業務用厨房用品カタログ

EBEMATSU SHOJI CO.,LTD

Ebematsu is a wholesale and manufacturing company for kitchen tools mainly for professional use.

With the vast range of kitchenware in very good supply, we provide you both with high-quality made- in- Japan products and traditional unique Japanese items.

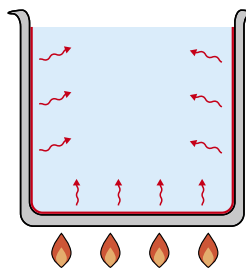

- 01 Ramen
- 07 Sushi
- 11 Tempura/Soba/Udon
- 15 Knives/Cutting Board
- 20 Kitchenware
- 23 Stainless steel Container
- 24 Colander/Mixing Bowl
- 25 Cooking Equipment
- 27 Grill
- 29 Pot/Table topware
- 30 Tableware
- 31 Sakeware

Ramen

Resonable & High Quality

Aluminum is excellent in thermal conductivity (about 13 times against stainless steel), it is heated thoroughly from the entire pan. The temperature gap of the inside is few, and it is suitable for making soup. The thicker the thickness, the more heat is dispersed. It becomes difficult to get a burn.

Molybdenum steel (sus316) is a material that increases the amount of nickel contained in stainless steel and it is also called rare metal. This makes it less rusting than normal stainless steel. ※In order to use it for long time, please clean and store it properly.

Kanematsu Japanese Steel Knives Yasuki White Steel (Wooden Handle)

Skilled blacksmiths have made fire-making forging and hardening in the same manner as Japanese swords. It is a gem that the soul of handmade is filled with the soul of the handmade by one piece which did the grilling and the tenacity.

With the 440A steel as the base, Glestain Steel performs a number of stages of special heat treatment. We thoroughly pursue high quality craftsmanship such as corrosion resistance, abrasion resistance, heat resistance and cold resistance, toughness, stability of hardness, and persistence in sharpness to achieve advanced functions. To the trust of the professional who has innovated in total in all aspects of the conventional it is the name of the world to respond. Glestain is the one with the blade finished by a professional engineer one by one.

<T type> The adhesion resistance applied to the side is minimized at the time of cutting. Because it is hard to adhere to the side of the cutting lot, workability is good, and the sharpness is good. Moreover, because the area of the blade sharpening is narrow, it is a design that is very easy to sharpen.

Reasonable and High quality

Aluminum is excellent in thermal conductivity (about 13 times the stainless steel), it is heated thoroughly from the entire pan. The inside temperature gap is few, and it is suitable for making soup. The thicker the thickness, the more heat is dispersed and it becomes difficult to get burn.

● Lazer Marking

The effect of tin ion makes the sake delicious and mellow !

Copper has excellent thermal conductivity and when you pour cold sake, it cools down at once. It keeps the coldness.

Tin
錫

Known as the most expensive metal after gold and silver, tin is very malleable and bendable. Though tin resembles silver in its whiteness, it does not rust nor tarnish easily. Also, pure tin is significantly antibacterial and safe for serving foods. In Japan, it has been said that tin removes the bitterness from Japanese sake as well as other beverages.
